

PYTHON BASICS FOR BEGINNERS

BY
KIDUS ABADI

PART ONE

What will we learn?

- What is programming language?
- What is Python?
- Why learn Python?
- Where is it used?
- Installing Python
- Writing your first program

Programming Languages

- A program is a set of instruction that tells a computer what to do
- A programming language is a language used to communicate instructions to a computer.
- Examples:
 - Python
 - JavaScript
 - Java
 - Dart
 - C
 - C++
- Each programming language has its own syntax and features.

What is Python?

- Python is a general-purpose programming language.
- It is known for its simple and readable syntax.
- It is used in many areas of technology.
- It distinguishes between uppercase and lowercase letters. (Is case sensitive)

Example:

- Correct 

```
print("Hello")
```

- Incorrect 

```
Print("Hello")
```

Why Learn Python?

- Beginner-friendly
 - e.g., `name = input("What is your name: ")`
`print("hello", name)`
- Easy-to-read syntax
 - e.g., `age = 20`
`if age >= 18`
`print("You are an Adult")`

Why Learn Python?

- Large community
- Many libraries
- Useful for many different careers

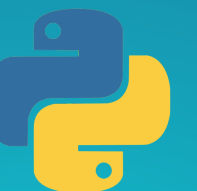

Where is it used?

- Web Development
- Artificial Intelligence
- Machine Learning
- Data Science
- Automation
- Game Development
- Software Development

installing python

Writing your first program

- `print("Hello World!")`
